

# Your recycling Checklist

KickStart Breakfast takes recycling and environment awareness seriously. We ask you to take the time to become familiar with our recycling process and ensure we all do our part to care for the environment.

## Recycling Your Cardboard Containers and Boxes

This is the cardboard you need to recycle, by putting it into your normal school cardboard recycling:

- The big cardboard cases that contain the 12 x Anchor™ Milk packs
- The big cardboard cases that contain the 12 x boxes of Sanitarium Weet-Bix™
- The empty Weet-Bix™ boxes
- If you don't currently have a cardboard recycling process, please contact your local city council for guidance.

## Recycling Your Empty Milk Packs

Fonterra will provide you:

- A smaller 80 litre recycling bin for putting the empty milk packs in, once they've been rinsed and folded or flattened.
- Recyclable bin liners to line the inside of the 80 litre bin
- A larger **240 litre** recycling bin – Once your small bin is about two-thirds full, tie off the bag and store this in your large bin.

\*If you are part of Fonterra Milk for Schools, please pop your rinsed & flattened 1L milk packs in with your folded Fonterra Milk for Schools milk packs.

### Where should you place the bins?

- Place the smaller 80 litre bin in a place that's easy to access, close to where your KickStart Breakfast club is located.
- Your large 240 litre bin needs to be kept in the shade in warmer months. Ensure your bin can be easily accessed by your Anchor™ Milk team on their next visit to collect your recycling.

# Guide to recycling

Follow these four steps to correctly prepare your Anchor™ 1L milk packs for recycling.

1

Once empty, rinse out the milk pack with water, swirling around to grab all milk residue. Rinse and keep the lid open.

2

Peel back the triangle flaps from the top of the milk pack.

3

Fully flatten the milk packs with the spout facing towards you, so all of the air escapes before you seal the lid and milk pack shut.

4

Place the flattened milk pack into your lined recycling bin.

# Guide to stacking & milk pack care

Follow the process below to ensure your milk is stacked correctly.

## REMEMBER

- If another delivery arrives before you have used all the milk from your first delivery, make sure you stack it separately
- Use all the milk from each delivery before you start on the new pile

1

'BEST BEFORE' information is located on the side of the pack.

Make sure you can see the 'BEST BEFORE' date when stacking.

2

Check the 'BEST BEFORE' date on the milk pack and use the pack with the earliest date first.

3

To make sure your milk boxes don't fall over, stack them using the interlock system. For safety, it's best not to stack them more than five cases high.

4

If you find a box is damaged or leaking, move it from your pile, and place it to one side with a note saying, 'do not consume'. Call your Anchor milk team for a replacement.
